Dear Sir,

With regard to subscription of Company Fundamental & Stock Price Data Feed APIs, we have started sending incremental data through API. Refer below existing token to download daily incremental data feeds.

Token- JKNU7M7Dx684AZqkVFPHPhmN5JOvhPPK

We have whitelisted following two public IPs for API access. One IP will be the primary IP, which will be used for fetching data on a daily basis. The second IP will serve as a backup, to be used in case there are any issues with the primary IP.

20.235.61.125 (Primary) | 20.235.172.130 (Secondary)

Download latest technical documents and one time data dump from below links.

TechDoc- https://aceservice.acesphere.com/rawdata/download/Neoble_IndiwealthTechnologies_TechDoc_20260331.zipDataDump- https://aceservice.acesphere.com/rawdata/download/Neoble_IndiwealthTechnologies_DataDump_20260331.zip

Following example API for your reference. Refer latest technical documents for complete details.

Create the database tables according to the structure provided in the technical documentation. Additionally, you will be required to restore a one-time data dump.

We will send incremental data updates via API feeds, which will contain recently added or updated data. These updates need to be inserted or updated into the respective tables on a daily basis, as indicated by the following flags.

The "Flag" column in the files denotes the update action. There are three types of flags: 'A', 'O', and 'D'.

For records with the 'A' or 'O' flag, you should check if the record already exists in your database based on the primary key. If the record is found, it should be updated; if not, it should be inserted as a new record.

For records with the 'D' flag, the corresponding record should be deleted from your database.

Please note that the download link for Technical Documents & Data Dump will remain active for only one week. We kindly request that you maintain the data and update the incremental data daily via the API.

We also request you to monitor the daily API calls. In the event of any failures, you can retrieve backdated data (for the last 7 days) from the API and update your database in chronological order, starting from the missing date.

Thanks & Regards,

Vishal Bane

Manager - Data Analyst
